

Rahul Rajput

Full-Stack Engineer

📍 Mumbai, India | ✉ rrahulrajput2006@gmail.com | ☎ +91 81080 68981 | 🌐 github.com/r2hu1
🌐 linkedin.com/in/r2hu1 | 🌐 r2hu1.is-a.dev

Summary

Software Engineer focused on building and shipping real products, with experience across frontend, backend, databases, native applications, and cloud infrastructure. Strong in TypeScript, React, Next.js, Node.js, PostgreSQL, and modern full-stack architecture. Have taken products from idea to production, built software used by real customers, and contributed to open-source projects and earned over 600+ stars on repos. Comfortable owning features end-to-end and moving quickly in startup environments.

Side Hustles

SonarBook, August 2026 – India, Mumbai

<https://sonarbook.com>

- Architected and built a native-first CRM and business management platform for jewellery retailers, covering customers, sales, payments, loans, inventory, memberships, and day-to-day store operations.
- Designed an offline-first architecture with local SQLite storage and bidirectional synchronization, enabling the application to remain fully usable during network interruptions while safely reconciling changes with the server.
- Built the application using React, TypeScript, Tauri, SQLite, PostgreSQL, Drizzle, and TanStack Query, with shared types and data models across the client and backend.
- Engineered a conflict-aware sync system with versioned records, incremental changes, idempotent operations, and server-side concurrency checks to maintain data consistency across devices.
- Owned the product end-to-end
- from system architecture and database design to native application development, synchronization, deployment, and UX
- with a focus on reliability and performance in real-world retail environments.

RosterPro, May 2026 (sold) – India, Mumbai

<https://rosterpro.in>

- Architected and built the core platform from the ground up, powering restaurant QR ordering, menu management, table operations, billing, kitchen workflows, and analytics across multiple web applications and backend services.
- Designed a type-safe monorepo architecture spanning React/Next.js, TypeScript, Hono, PostgreSQL, Redis, and shared packages, enabling consistent API contracts, database schemas, UI components, and business logic across the product.
- Engineered production infrastructure for authentication, payments, real-time events, caching, media storage, and secure QR ordering, including short-lived, device-bound ordering sessions to prevent unauthorized orders from shared QR links.
- Built the platform to handle millions of requests, with architecture focused on reliability, low-latency APIs, and horizontal scalability.
- Owned the complete product lifecycle
- from system architecture and infrastructure to product development and deployment
- working directly on technical decisions that affected performance, reliability, security, and developer velocity.

Professional Experience

Full-Stack Engineer (TL), Tayst Ai – New York, NY (Remote) Dec 2025 – May 2026

- Led architecture and delivery of the company's entire backend, frontend, and microservices stack, ensuring system reliability and horizontal scalability across production environments
- Defined engineering standards, reviewed pull requests, and mentored junior contributors while driving adoption of type-safe Api patterns to reduce runtime errors
- Coordinated directly with Us-based stakeholders to translate product requirements into technical roadmaps and shipped features on aggressive timelines
- Owned deployment pipelines and infrastructure configuration on Vercel and serverless environments, maintaining high uptime for paying customers

Founding Full-Stack Engineer, Tayst Ai – New York, NY (Remote) Sept 2025 – Nov 2025

- Joined as a founding engineer and built the company's scalable backend and microservices infrastructure from the ground up
- Contributed to the frontend in Next.js and React, delivering core product Ui flows and integrating backend Apis to create a seamless end-to-end user experience
- Established database schema, authentication flows, and Api contracts early in the product lifecycle, enabling rapid iteration

Frontend Developer, Portals – London, UK (Remote) Mar 2025 – June 2025

- Built and maintained dynamic pages across the startup's web platform using Next.js, React, TypeScript, and Tailwind CSS, delivering responsive and performant user experiences.
- Integrated third-party and internal REST APIs, handling loading, error, and edge states to ensure reliable experiences across devices.
- Collaborated directly with the founding team on product development and frontend architecture, rapidly shipping features and iterating based on user feedback.

Open-Source Builder, GitHub – Remote

- Developed more than 60 full-stack projects
- Has more than 600+ stars across repos

Selected Projects

Freerouter - LLM Router (sdk and openai compatible api)

- Built an open-source LLM routing platform with an OpenAI-compatible API and type-safe TypeScript SDK, allowing developers to switch between multiple AI providers without changing application code.
- Designed a unified provider abstraction with automatic routing, retries, fallbacks, and normalized error handling, improving resilience across heterogeneous AI APIs.
- Engineered the platform for low-latency request routing and production workloads, with a modular architecture that makes adding new providers straightforward.
- **Live:-** <https://freerouter.vercel.app>
- **Github:-** <https://github.com/r2hu1/freerouter>

Border Code - Open Source Terminal Coding Agent (like claude code)

- Built a full-featured, on-device AI coding agent that runs entirely in the terminal.
- Features dual PLAN/BUILD modes, a multi-step ToolLoopAgent that autonomously reads, writes, and executes files (up to 25 steps), 7 sandboxed tools, support for OpenAI/Claude/Gemini/Groq/Mistral, persistent sessions via SQLite/Drizzle/JSON, 31 themes, and a rich TUI with mouse support.
- Monorepo structure across cli, core/api, and shared packages.
- **Live:-** [View Demo Video](#)
- **Github:-** <https://github.com/r2hu1/border-code>

Gluer - Full-Stack Scheduling & Paid Bookings SaaS

- Built a production SaaS platform that combines calendar scheduling, link-in-bio management, and paid bookings in one product. Integrates two payment processors (Creem, Dodo) (not opensourced yet).
- Google Calendar OAuth sync, Resend for transactional email, and Cloudinary for storage.
- Stack: Next.js 16 App Router, TypeScript, Bun, PostgreSQL with Drizzle ORM, Better Auth, Tailwind v4, Cloudinary SDK, Tanstack Query.
- **Live:-** <https://gluer.space>
- **Live Profile:-** <https://gluer.space>

Cavio - AI-Integrated Writing Platform

- Built a full-featured Notion-like writing and content platform with AI autocomplete, an inline writing assistant (Gemini), rich document editor, folder management, and OAuth via Google and GitHub.
- Next.js, React.js, AI SDK, Gemini AI SDK, tRPC, Drizzle ORM, PostgreSQL, Better Auth, Tanstack Query.
- **Live:-** <https://cavio.vercel.app>
- **Github:-** <https://github.com/r2hu1/cavio>
